1 Introduction

2 Description du code

2.1 Main

```python
def signal(p, dico):
        outside, d_min = dico['defZone'].Distance_Between_a_Point_and_the_Modules(p)
        if outside:
                return sum(1/d_min)
        else:
                return 2*max(isoligne)
```
